

**Sweet Summer Hydrangea**  
*Hydrangea paniculata 'Sweet Summer'*

Height: 4 feet

Spread: 4 feet

Sunlight: ○ ● ●

Hardiness Zone: 3b

**Description:**

A showy garden shrub valued for its cone-shaped panicles of elegant white flowers which mature with flushes of light pink; somewhat coarse in appearance, regular pruning recommended; needs slightly acidic well-drained soil

**Ornamental Features**

Sweet Summer Hydrangea features bold conical white flowers at the ends of the branches from mid summer to late fall. The flowers are excellent for cutting. It has green foliage throughout the season. The pointy leaves do not develop any appreciable fall colour. The fruit is not ornamentally significant.

**Landscape Attributes**

Sweet Summer Hydrangea is a multi-stemmed deciduous shrub with an upright spreading habit of growth. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

This is a high maintenance shrub that will require regular care and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. It has no significant negative characteristics.

Sweet Summer Hydrangea is recommended for the following landscape applications;

### **Planting & Growing**

Sweet Summer Hydrangea will grow to be about 4 feet tall at maturity, with a spread of 4 feet. It tends to be a little leggy, with a typical clearance of 1 foot from the ground. It grows at a medium rate, and under ideal conditions can be expected to live for 40 years or more.

This shrub performs well in both full sun and full shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.
