

Sienna Glen Maple
Acer x freemanii 'Sienna'

Height: 40 feet

Spread: 30 feet

Sunlight: ○

Hardiness Zone: 3a

Description:

One of the very hardiest red fall-coloring shade trees available, this Silver/Red hybrid maple features a uniform branching habit and attractive pyramidal-oval shape; tolerant of alkaline, acidic soil conditions

Ornamental Features

Sienna Glen Maple features showy clusters of red flowers along the branches in early spring before the leaves. It has green deciduous foliage. The lobed leaves turn outstanding shades of orange, red and burgundy in the fall. The furrowed gray bark and brick red branches add an interesting dimension to the landscape.

Landscape Attributes

Sienna Glen Maple is a deciduous tree with a shapely oval form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance tree, and should only be pruned after flowering to avoid removing any of the current season's flowers. It has no significant negative characteristics.

Sienna Glen Maple is recommended for the following landscape applications;

- Accent
- Shade

Planting & Growing

Sienna Glen Maple will grow to be about 40 feet tall at maturity, with a spread of 30 feet. It has a high canopy with a typical clearance of 7 feet from the ground, and should not be planted underneath power lines. As it matures, the lower branches of this tree can be strategically removed to create a high enough canopy to support unobstructed human traffic underneath. It grows at a fast rate, and under ideal conditions can be expected to live for 70 years or more.

This tree should only be grown in full sunlight. It is very adaptable to both dry and moist locations, and should do just fine under average home landscape conditions. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
