

Henry Kelsey Rose
Rosa 'Henry Kelsey'

Height: 7 feet

Spread: 5 feet

Sunlight: ○

Hardiness Zone: 3a

Group/Class: Explorer Rose

Description:

A popular climbing rose that features loads of beautiful double red flowers in early summer; repeat-blooming; hardy and resistant to disease; makes a beautiful flowering screen for arbors and fences; requires full sun and well-drained soil.

Ornamental Features

Henry Kelsey Rose is blanketed in stunning fragrant red flowers with yellow eyes along the branches from late spring to late summer. The flowers are excellent for cutting. It has dark green foliage throughout the season. The oval compound leaves turn yellow in fall. The fruits are showy orange hips displayed from mid to late fall. The spiny brick red bark adds an interesting dimension to the landscape.

Landscape Attributes

Henry Kelsey Rose is a multi-stemmed deciduous woody vine with a twining and trailing habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a high maintenance woody vine that will require regular care and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. It has no significant negative characteristics.

Henry Kelsey Rose is recommended for the following landscape applications;

- Hedges/Screening
- General Garden Use
- Groundcover

Planting & Growing

Henry Kelsey Rose will grow to be about 7 feet tall at maturity, with a spread of 5 feet. As a climbing rose, it can be leggy near the base and may be concealed by underplanting with lower-growing facer plants. It should be planted near a fence, trellis or other landscape structure where it can be trained to grow upwards on it, or allowed to trail off a retaining wall or slope. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 20 years.

This woody vine should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid.
