

Champagne Elegance Iris
Iris 'Champagne Elegance'

Plant Height: 21 inches

Flower Height: 32 inches

Spread: 21 inches

Spacing: 16 inches

Sunlight:

Hardiness Zone: 3a

Group/Class: Tall Bearded

Description:

This interesting variety produces lovely near-white standards with apricot-peach falls and bright yellow beards; a stunning addition to the perennial border; consistently re-blooms in late summer; sweet, orange blossom fragrance

Ornamental Features

Champagne Elegance Iris has masses of beautiful lightly-scented white flag-like flowers with peach falls at the ends of the stems from mid spring to late summer, which are most effective when planted in groupings. The flowers are excellent for cutting. Its sword-like leaves remain grayish green in colour throughout the season. The fruit is not ornamentally significant.

Landscape Attributes

Champagne Elegance Iris is an herbaceous perennial with an upright spreading habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This plant will require occasional maintenance and upkeep, and should be cut back in late fall in preparation for winter. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects

Champagne Elegance Iris is recommended for the following landscape applications;

- Mass Planting
- General Garden Use

Planting & Growing

Champagne Elegance Iris will grow to be about 21 inches tall at maturity extending to 32 inches tall with the flowers, with a spread of 21 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 16 inches apart. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years.

This plant does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
