**Description:**

An evergreen perennial which makes an excellent full-season groundcover; absolutely covered in showy pink flowers in early spring, fine foliage all year long; forms spreading mounds; tough, durable and extremely hardy

**Ornamental Features**

Arctic Phlox is smothered in stunning hot pink star-shaped flowers at the ends of the stems from early to late spring. Its tiny needle-like leaves remain dark green in colour throughout the year.

**Landscape Attributes**

Arctic Phlox is a dense herbaceous evergreen perennial with a ground-hugging habit of growth. It brings an extremely fine and delicate texture to the garden composition and should be used to full effect.

This plant will require occasional maintenance and upkeep, and should only be pruned after flowering to avoid removing any of the current season's flowers. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spreading

### **Planting & Growing**

Arctic Phlox will grow to be only 4 inches tall at maturity, with a spread of 24 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 18 inches apart. Its foliage tends to remain low and dense right to the ground. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an evergreen perennial, this plant will typically keep its form and foliage year-round.

This plant does best in full sun to partial shade. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. Consider covering it with a thick layer of mulch in winter to protect it in exposed locations or colder microclimates. This species is native to parts of North America. It can be propagated by division.
