

Montgomery Spruce
Picea pungens 'Montgomery'

Height: 12 feet

Spread: 8 feet

Sunlight:

Hardiness Zone: 3a

Description:

A small, dense mounded shrub, very unlike the species, starting as a mound and eventually becoming a miniature Christmas tree-like shape, adaptable and hardy; vibrant blue needles, an excellent choice for form and color in the garden composition

Ornamental Features

Montgomery Spruce is primarily valued in the landscape or garden for its distinctively pyramidal habit of growth. It has attractive silvery blue evergreen foliage. The needles are highly ornamental and remain silvery blue throughout the winter.

Landscape Attributes

Montgomery Spruce is a dense evergreen tree with a strong central leader and a distinctive and refined pyramidal form. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a high maintenance tree that will require regular care and upkeep. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Montgomery Spruce is recommended for the following landscape applications;

- Vertical Accent
- General Garden Use

Planting & Growing

Montgomery Spruce will grow to be about 12 feet tall at maturity, with a spread of 8 feet. It has a low canopy, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 60 years or more.

This tree does best in full sun to partial shade. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for xeriscaping or the moisture-conserving landscape. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selection of a native North American species.
