

**Orangeade Potentilla**  
*Potentilla fruticosa 'Orangeade'*

Height: 24 inches

Spread: 24 inches

Sunlight:

Hardiness Zone: 2b

**Description:**

New! A colorful and unquestionably tough shrub for general garden use; features deep orange flowers with cheery yellow centers that contrast well against the green foliage; grows with a markedly horizontal and spreading habit.

**Ornamental Features**

Orangeade Potentilla has tomato-orange flowers with orange overtones and yellow eyes at the ends of the branches from late spring to early fall. It has grayish green deciduous foliage. The small ferny compound leaves do not develop any appreciable fall colour.

**Landscape Attributes**

Orangeade Potentilla is a dense multi-stemmed deciduous shrub with a more or less rounded form. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance shrub, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Orangeade Potentilla is recommended for the following landscape applications;

- Mass Planting
- General Garden Use

**Planting & Growing**

Orangeade Potentilla will grow to be about 24 inches tall at maturity, with a spread of 24 inches. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub does best in full sun to partial shade. It is very adaptable to both dry and moist locations, and should do just fine under typical garden conditions. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selection of a native North American species.
