

**Goldspur Amur Cherry**  
*Prunus maackii 'Jefspur'*

Height: 15 feet

Spread: 10 feet

Sunlight: ☉ ●

Hardiness Zone: 2a

**Description:**

A distinctive dwarf selection of Amur cherry with controlled growth and unique dark green foliage, narrowly upright habit of growth, short racemes of white flowers are followed by tiny black fruit; low maintenance, resistant to black knot

**Ornamental Features**

Goldspur Amur Cherry features dainty racemes of fragrant white flowers hanging below the branches in mid spring. It has attractive forest green deciduous foliage. The narrow palmate leaves are highly ornamental and turn yellow in fall. The black fruits are held in clusters in late summer. The smooth antique red bark adds an interesting dimension to the landscape.

**Landscape Attributes**

Goldspur Amur Cherry is a dense deciduous tree with a shapely oval form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance tree, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting birds to your yard. It has no significant negative characteristics.

### **Planting & Growing**

Goldspur Amur Cherry will grow to be about 15 feet tall at maturity, with a spread of 10 feet. It has a low canopy with a typical clearance of 3 feet from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 40 years or more.

This tree does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This is a selected variety of a species not originally from North America.
