

Prairie Splendor Norway Maple
Acer platanoides 'Prairie Splendor'

Height: 33 feet

Spread: 25 feet

Sunlight: ○

Hardiness Zone: 3b

Description:

This upright oval shaped shade tree is graced with burgundy to rich purple leaves throughout the whole season; hardy enough for northern gardeners; will adapt to most soils. Selected from a hardy Crimson King Maple growing in Lethbridge, AB

Ornamental Features

Prairie Splendor Norway Maple has attractive deep purple foliage which emerges burgundy in spring. The lobed leaves are highly ornamental and turn an outstanding burgundy in the fall. It is covered in stunning corymbs of lemon yellow flowers along the branches in early spring before the leaves. The fruit is not ornamentally significant.

Landscape Attributes

Prairie Splendor Norway Maple is a dense deciduous tree with a shapely oval form. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

This is a relatively low maintenance tree, and should only be pruned in summer after the leaves have fully developed, as it may 'bleed' sap if pruned in late winter or early spring. It has no significant negative characteristics.

Prairie Splendor Norway Maple is recommended for the following landscape applications;

- Accent
- Shade

Planting & Growing

Prairie Splendor Norway Maple will grow to be about 33 feet tall at maturity, with a spread of 25 feet. It has a high canopy with a typical clearance of 6 feet from the ground, and should not be planted underneath power lines. As it matures, the lower branches of this tree can be strategically removed to create a high enough canopy to support unobstructed human traffic underneath. It grows at a medium rate, and under ideal conditions can be expected to live for 80 years or more.

This tree should only be grown in full sunlight. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
