

**Weeping Eastern White Pine**  
*Pinus strobus 'Pendula'*

Height: 7 feet

Spread: 10 feet

Sunlight: ☉

Hardiness Zone: 3b

**Description:**

A loose weeping form and trailing shrub or small tree, very unlike the species; features soft blue needles, tends to crawl along the ground and over rocks or walls, or forms a small weeping accent plant if trained on a standard; sheltered locations

**Ornamental Features**

Weeping Eastern White Pine is a dwarf conifer which is primarily valued in the landscape or garden for its highly ornamental weeping form. It has attractive bluish-green evergreen foliage. The needles are highly ornamental and remain bluish-green throughout the winter.

**Landscape Attributes**

Weeping Eastern White Pine is a multi-stemmed evergreen shrub with a rounded form and gracefully weeping branches. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This shrub will require occasional maintenance and upkeep, and usually looks its best without pruning, although it will tolerate pruning. It has no significant negative characteristics.

Weeping Eastern White Pine is recommended for the following landscape applications;

- Accent
- General Garden Use

### **Planting & Growing**

Weeping Eastern White Pine will grow to be about 7 feet tall at maturity, with a spread of 10 feet. It has a low canopy with a typical clearance of 2 feet from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 50 years or more.

This shrub should only be grown in full sunlight. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is not particular as to soil type or pH. It is quite intolerant of urban pollution, therefore inner city or urban streetside plantings are best avoided, and will benefit from being planted in a relatively sheltered location. This is a selection of a native North American species.
